

Supplementary Materials for

A two-gene module at the qHT3 locus protects chloroplasts under heat in a synthetic rice population

SYNTHETIC EXAMPLE DOCUMENT - not a real publication.

Materials and Methods

Twelve-day-old seedlings were treated at 42 C for 14 h and survival was scored after 7 days of recovery. Each line was tested in 3 biological replicates of 24 plants. Survival rates were compared with a two-tailed t test. Split-luciferase assays were performed in *Nicotiana benthamiana* leaves.

Fig. S1 Survival of SL14 and WY after heat treatment.

Line Survival

SL14 78.5 %

WY 21.3 %
